

Clint Beharry

Portland, OR (Open to SF/LA relocation) | 305-775-8822 | clintbeharry@gmail.com | [LinkedIn](#) | [Portfolio](#)

Lead Product Designer

12+ years at the frontier of embodied and generative AI, from pioneering one of the earliest production human-in-the-loop AI systems in 2015 to Meta's AI-driven virtual characters. I'm now building solo, shipping fast, and focused on tackling real human fulfillment mediated by AI instead of optimized for unhealthy attention.

Skills

AI Design & Prototyping: Figma, Claude Design, Paper, Google Stitch, Protopie, Framer

AI Technical & Coding: Claude Code, ChatGPT Codex, Cursor, React, TypeScript, HTML/CSS, Swift, Python, C#

Experience

Tortoise Labs - Portland, OR

1/2026 - Present

Independent Designer & Developer

- Heist AI (public alpha testing): Solo-built two player game that pairs strangers around real-world activities and uses an AI chatbot to build rapport before they meet in person, breaking from solo-profile social apps toward real conversation and empathic connection.
- To AI or Not to AI (launched Sept 2026): Solo-built 100 AI use cases quiz designed to compare answers and spark conversations, not a solo result card. Users are sharing to 4 others on average, and 90% use the comparison feature for deeper discussions. Data shows what AI can't replace: Art, love, death, and justice.

Meta - San Francisco, CA

4/2019 - 5/2026

Staff Product Design Prototyper

- Spearheaded Instagram's first AI-driven content creation system for virtual characters, using Claude Design and Claude Code prototypes to define new AI interaction and design systems, scaling AI-powered experiences across Meta's family of apps and bridging 10x more users.
- Led end-to-end incubation of Meta Reality Labs' first consumer generative AI product, a novel multi-agent workflow, from ambiguous brief through strategy, design, and coded prototypes to shipped experience, building new design systems that increased engagement 430% across mobile and web.
- Led defining the responsible-AI design criteria, guardrails, and human-in-the-loop review gates for shipping Meta's generative AI features, balancing user trust against speed.

Within (a16z-backed startup) - Los Angeles, CA

3/2017 - 3/2019

Founding Product Designer

- Founding product designer and prototyper on Supernatural, crafting the retention, growth, and design systems across mobile and web for an XR fitness app that grossed the highest-ever subscription profits on Meta's app store, leading to acquisition by Meta.
- Led global research and product design on Wonderscope, a shipped iOS app and voice-driven AI & AR story platform that reached over a million kids, invited by Apple to showcase ARKit on-stage at WWDC. Awarded Apple's App of the Day and BAFTA. Acquired by Amira Learning.

Harmony Labs - New York, NY

8/2011 - 11/2016

Senior Creative Technologist

- Founded Narrative Observatory, one of the earliest production AI plus human-in-the-loop editorial systems in market, enabling major foundations (Gates, MacArthur, Robert Wood Johnson) to make data-driven creative and financial decisions.

Education

MFA, Interaction Design | School of Visual Arts - New York, NY

BS, Computer Engineering | University of Miami - Miami, FL
