Staff Product Designer, Gamified & AI-Native Consumer Products

15+ years designing gamified, AI-native consumer products end-to-end, from Meta's multi-agent AI systems and chat-driven virtual characters to responsible AI guardrails I helped define. Previously led startups to 3 acquisitions and 2 spin-outs. Most recently designed and shipped two AI-driven, gamified apps solo, from concept to production.

Skills

Design & Prototyping: Figma, Claude Design, Paper, Google Stitch, Protopie, Framer

AI & Chat Interfaces: Claude Code, ChatGPT Codex, Cursor, Gemini, agentic workflows, AI chatbot design

Design Systems & Craft: Component libraries, design systems, gamification, behavioral science, persuasive design

Responsible AI: Guardrails, human-in-the-loop evaluation frameworks, data organization, context architecture

Code: React, TypeScript, JavaScript, HTML/CSS, Swift, Python, C#

Experience

Tortoise Labs – Portland, OR

6/2026 – Present

Independent Designer & Developer

- **Heist** (public alpha testing): solo-designed and built a gamified app that pairs strangers around real-world activities and uses an AI chatbot, the "Heist Boss," to build rapport before they meet in person, currently in public alpha testing with real users.
- **To AI or Not to AI** (launched September 2026): solo-designed and built a gamified AI quiz with a custom progress indicator, built to be playful and engaging yet technical and scientific without dark UX patterns. Users share to an average of 4 others, and 90% engage with the comparison feature.

Meta – San Francisco, CA

4/2019 – 5/2026

Staff Product Design Prototyper

- Spearheaded Instagram's first generative AI product, gamified virtual AI pets, and Meta Reality Labs' AI-driven character creation system, from ambiguous brief through coded prototypes to shipped experience, building design systems that increased engagement 430% and scaled AI-powered experiences to 10x more users.
- Built and maintained cross-platform design systems for Meta Reality Labs' consumer products, including integrity and safety teams, establishing component libraries and patterns that scaled across mobile, web, and desktop, reducing design-to-developer ambiguity across engineering teams.
- Defined responsible integration criteria and evaluation frameworks with engineering and product partners, including guardrails, bias checkpoints, and human-in-the-loop review gates, to ship AI/ML features that improved outcomes without sacrificing user trust.

Within XR (a16z-backed startup) – Los Angeles, CA

3/2017 – 3/2019

Founding Product Designer

- Founding product designer and prototyper on Supernatural, a gamified VR fitness app, crafting the retention, growth, and design systems across mobile and web that drove the highest-ever subscription profits on Meta's app store, leading to acquisition by Meta.
- Led global research and product design on Wonderscope, a shipped iOS app and voice-driven AR story game that reached over a million kids, invited by Apple to showcase ARKit on-stage at WWDC. Awarded Apple's App of the Day and a BAFTA, later acquired by Amira Learning.

The Wall Street Journal – New York, NY

7/2016 – 2/2017

Senior Product Designer

- Led end-to-end design for WSJ's first exploratory rich media products inside the Dow Jones Innovation Lab, translating complex technical workflows, real-time 3D stock data and multi-source financial data pipelines, into clear, trustworthy interfaces for a technical audience of traders and data vendors, from concept through launch.

Harmony Labs – New York, NY

8/2011 – 11/2016

Senior Creative Technologist

- Founded Narrative Observatory, one of the earliest AI plus human-in-the-loop editorial systems in market, translating complex portfolio and social impact datasets into clear, trustworthy insights for institutional investors and major foundations (Gates, MacArthur, Robert Wood Johnson), a high-stakes expert audience.

Education

MFA, Interaction Design | School of Visual Arts – New York, NY

BS, Computer Engineering | University of Miami – Miami, FL
